Summary

CS undergrad at VIT-AP (2027) with hands-on experience in full stack development, microservices, and event-driven systems. Built projects using Spring Boot, Kafka, and PostgreSQL; solved 300+ problems on LeetCode.

Education

Bachelor of Technology in Computer Science and Engineering — India
VIT-AP University, Amaravati — *2023 – 2027*
- CGPA: 8.53 / 10.0

Intermediate (Class XII – Senior Secondary) — India
BIEAP, Sri Chaitanya Junior College, Vijayawada — *2021 – 2023*
- Percentage: 96.5%

Skills

Programming Languages: Java, Python, JavaScript
Frontend: HTML, CSS, React, Next.js
Mobile: Flutter
Backend & APIs: Spring Boot, Spring Security, Spring Data JPA, RESTful APIs, JWT Authentication, FastAPI
Distributed Systems: Microservices Architecture, Apache Kafka
Databases: MySQL, PostgreSQL, MongoDB
Cloud (AWS): EC2, S3, RDS, Lambda, API Gateway, CloudWatch, IAM, VPC, DynamoDB, SNS, SQS
Tools & Platforms: Git, Docker, Postman
ML & AI: Scikit-learn, Pandas, NumPy, Matplotlib
Core Computer Science: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Projects

Wayfinder — **GitHub Link**
- Full-stack route-planning engine that computes shortest paths on real road networks using a custom **Dijkstra** implementation on **OpenStreetMap** data.
- Designed a **Spring Boot** backend with **PostGIS**-powered nearest-node snapping to map arbitrary coordinates to road intersections, exposed via a clean REST API.
- Developed an interactive **React + Leaflet.js** frontend with click-to-pin navigation, live route rendering, and distance and estimated travel time display.

SkillSwap — **GitHub Link**
- Peer-to-peer skill exchange platform where users list skills they offer and seek, get matched with compatible peers, and manage exchange requests end-to-end.
- Engineered a skill matching engine using **Spring Boot** and **PostgreSQL**, supporting session scheduling, completion tracking, and a post-session rating system.
- Secured all endpoints with **JWT**-based authentication and role-based access control, ensuring users only access their own exchanges and sessions.

CouponPing — **GitHub Link**
- Built a smart coupon wallet using **Flutter** that helps users organize coupons, track expiry dates, and receive timely reminders to prevent unused discounts from expiring.
- Integrated **Google ML Kit** for OCR and barcode scanning to automatically extract coupon details, detect expiry dates, and store barcode information for quick redemption.
- Implemented offline-first storage using **Hive** with **Riverpod** state management, featuring search, filtering, analytics, and scheduled local notifications for expiring coupons.

Leadership & Activities

ACM Student Chapter, VIT-AP: Technical Team Core Member; organized technical events, workshops, and coding activities.
GeeksforGeeks Club, VIT-AP: Social Media Team Member; contributed to content creation and community engagement.

LeetCode: Solved 300+ problems across Data Structures and Algorithms; focused on arrays, linked lists, stacks and trees.
