Summary

CS undergrad at VIT-AP (2027) with hands-on experience building full-stack web applications using Java, Spring Boot, PostgreSQL, and React, along with cross-platform mobile development using Flutter.

Education

Bachelor of Technology in Computer Science and Engineering — India
VIT-AP University, Amaravati — *2023 – 2027*
- CGPA: 8.53 / 10.0

Skills

Programming Languages: Java, Python, JavaScript
Frontend: HTML, CSS, React, Next.js
Backend & APIs: Spring Boot, Spring Security, Spring Data JPA, RESTful APIs, JWT, Microservices Architecture
Databases: MySQL, PostgreSQL, MongoDB
Cloud (AWS): EC2, S3, RDS, Lambda, IAM, DynamoDB
Tools & Build: Git, GitHub, Maven, Docker, CI/CD, Postman, Claude Code
Data & ML Libraries: NumPy, Pandas, Scikit-learn, Matplotlib
Mobile: Flutter
Core Computer Science: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Projects

Wayfinder — **GitHub Link**

- Full stack route-planning engine that computes shortest paths on real road networks using a custom **Dijkstra** implementation with a min-heap, running on live **OpenStreetMap** data for an entire city.
- Designed a **Spring Boot** backend that loads the full road graph into memory at startup, cutting route computation to under 100ms by eliminating repeated database round-trips per request.
- Built **PostGIS**-powered nearest-node snapping using a GiST spatial index (KNN queries) to map arbitrary map clicks to the nearest road intersection in O(log n) time, exposed via a clean REST API.
- Developed an interactive **React + Leaflet.js** frontend with click-to-pin navigation, live route rendering, and distance and estimated travel time display.

SkillSwap — **GitHub Link**

- Peer-to-peer skill exchange platform where users list skills they offer and seek across 7 categories, get matched with compatible peers, and manage exchange requests end-to-end.
- Engineered a skill matching engine using **Spring Boot** and **PostgreSQL**, exposing 20+ REST endpoints spanning matching, exchanges, session scheduling, completion tracking, and a post-session rating system.
- Secured all endpoints with **JWT**-based authentication and role-based access control, ensuring users only access their own exchanges and sessions.

CouponPing — **GitHub Link**

- Built a smart coupon wallet using **Flutter** with a clean, feature-first architecture that helps users organize coupons, track expiry dates, and receive timely reminders to prevent unused discounts from expiring.
- Integrated **Google ML Kit** for on-device OCR and barcode scanning to automatically extract store, discount, and expiry details straight from a photo, removing manual data entry.
- Implemented offline-first storage using **Hive** with **Riverpod** state management, featuring scheduled local notifications at 7/3/1-day expiry offsets, savings analytics with animated charts, and a color-coded calendar view.

Certifications

Java Spring Framework, Spring Boot, Spring AI – Gen AI: Udemy
AWS Academy Graduate – Cloud Foundations: Credly by Pearson

Leadership & Activities

ACM Student Chapter, VIT-AP: Technical Team Core Member; organized technical events, workshops, and coding activities.
